

Notification Tool with ADT Information Offered in Availity Essentials for Primary Care Physicians

The Primary Care Physician (PCP) Notification tool in Availity Essentials™ is available to all our providers registered with Availity®. This notification tool alerts PCPs to a patient's admission, discharge, and transfer (ADT) hospital events, and incorporates data from facilities already sharing such ADT information through Availity.

Access to the Tool

To access the PCP Notification tool in Availity, click on the **Clinical** dropdown on the navigation bar and select **PCP Notification**. To see the tool in the dropdown menu, you must have the appropriate role assigned to you – either Medical Staff or Office Staff. If you are unable to access it, contact your group administrator to request the appropriate role.

Key Features

The PCP Notification tool provides information that can assist you in caring for patients who were recently seen in the Emergency Room (ER) or admitted to other inpatient/outpatient settings. Specifically, the tool provides information on:

- Member inpatient and outpatient admissions
- ER visits
- Admission and discharge dates
- Facility information
- Diagnosis and Procedure Codes (when provided)

This resource can help you stay informed of your patients' admissions and can assist you with:

- Following up with your patients after discharge
- Reconciling patients' medications
- Performing other activities to help reduce costs and improve outcomes for your patients

Please note, the PCP Notification tool is a notification-only feature and does not interact with other tools or features that engage with ADT data.

For more information on the PCP Notification tool, visit Availity's Learning Center on the [Availity](#) homepage. Click on *Get Trained* under the *Help & Training* tab. Next type *PCP Notification* in the search bar. Select **PCP Notifications – Training Demo**. Then click *Enroll*.
